

Connecting with trading partners and integrating electronic documents improves the investment returns from accounting and supply chain systems

ADX Business Integration Services provide the expertise, management skill and tools necessary to help you electronically exchange business documents with trading partners and provide accurate and timely data specific to your back-office systems.

Outsourced EDI Services

ADX is a low cost alternative to VAN services and EDI/XML software, eliminating the costs, maintenance and staffing required of traditional EDI. ADX's Business Integration Services professionals act as an extension to your supply chain and EDI staff.

Document specification & template design

ADX designs and creates business document templates for each of your trading partners, incorporating their required business rules. Since your trading partners probably change business rules frequently (most large companies do), ADX routinely monitors these changes to ensure your transactions are up-to-date and error-free.

Data translation, mapping & validation

ADX provides any-to-any data translation supporting hundreds of document types, regardless of technology or data format. Data is validated upon entry to assure format and accuracy.

Back-office system integration

ADX provides automated processes and components for data exchange with accounting, ERP and supply chain back-office systems. This reduces manual data entry and dramatically accelerates transaction processing.

Secure message delivery

ADX Business Integration Services use a highly reliable and secure message delivery infrastructure enabling non-repudiation and audit trail.

Connectivity methods and resources

ADX business process consultants and solution delivery professionals personally integrate trading partners into your supply chain. We help companies build, manage and become productive members of electronic trading communities.
